

Abstract

Electronic commercial transaction system

An electronic commercial transaction system is provided that instead of processing just a single electronic commercial transaction, offers comprehensive new electronic commercial transaction services related to the payment processing, goods processing, distribution processing, etc. that accompany electronic commercial transactions, and provides cheaper and more convenient service. The system is equipped with first electronic commercial transaction system 11 that handles the placing and receiving of orders, and second electronic commercial transaction system 12 that provides transactions related to processing derived from the placement or reception of orders handled by first electronic commercial transaction system 11. Second electronic commercial transaction system 12 is activated upon receipt of order placement or reception information that is transmitted from first electronic commercial transaction system 11. At least either first electronic commercial transaction system 11 or second electronic commercial transaction system 12 is capable of providing transactions by a bidding process.
